

## CURED-IN-PLACE PIPE (CIPP)

TEC has built a solid reputation over 15 years for reliability, integrity and technical excellence as Hawaii's premiere contractor for no-dig utility installation. TEC now brings our standard of excellence to the pipeline rehabilitation field. In the last three years we have installed CIPP in sizes ranging from 4 to 30-inches. We are able to rehabilitate lines up to 99-inches in diameter.

TEC's CIPP team has many years of experience and has successfully installed miles of CIPP liner of all sizes nationwide. We use adaptable installation processes enabling TEC to line where others can't, due to challenging site conditions like steep grades and difficult access.

CIPP advantages include:

<ul style="list-style-type: none"> <li>Excavation of damaged pipe not required</li> </ul>	<ul style="list-style-type: none"> <li>Reduced asphalt, concrete and landscape restoration</li> </ul>	<ul style="list-style-type: none"> <li>Restores structural integrity</li> </ul>
<ul style="list-style-type: none"> <li>Lower cost</li> </ul>	<ul style="list-style-type: none"> <li>Installs rapidly: minimizes service interruption</li> </ul>	<ul style="list-style-type: none"> <li>Stops infiltration, root intrusion</li> </ul>
